International Journal of COMPUTER AND INFORMATION SCIENCES

Volume 9, 1980

International Journal of Computer and Information Sciences publishes (1) high-quality, definitive, ginal articles that have been appropriately reviewed by competent scientific workers, (2) reviews of ent developments in the field, and (3) tutorial and expository papers covering specific areas of interest applications of computer and information sciences. The journal aims to provide a forum for research rkers and students in the field and to expedite communication between them and other scientists interested pplications. We assume that the journal will be read by those with a common interest in computer and ormation sciences but with diverse backgrounds, such as engineering, mathematics, statistics, physics, mistry, management science, library science, biomedical science, and behavioral science. Emphasis laced upon both theoretical and experimental work that is of deep conceptual significance. The scope he journal includes: software engineering; systems programming; pattern recognition; picture processing; nputer graphics; information retrieval; computer organization; language processing; automata theory; thematical linguistics; computer control; data structure and access; management information systems; medical information processing.
